

# Walking Water Worksheet

## **Before Experiment: Make a Prediction**

1. What do you think will happen in the empty cups?

## **During the Experiment: Make Observations**

2. What color water is appearing in the empty cups?
3. Is the amount of water in the full cups getting lower or higher? In the empty cups?

## **After the Experiment: Draw Conclusions**

4. What color do you get when you mix red with yellow? Yellow with blue? Blue with red?
5. Do all the cups have the same amount of water?
6. How does water get from the ground all the way to the leaves of plants?

## **Bonus:**

Can you think of any other examples of capillary action? (Hint: you use one to drink)
